Positioning aid & pressure relief
Give every baby the benefit of gentle but stable positioning

Safe, developmentally supportive and durable head positioning system and stabilisation aid for prematures and newborns

Soft, comfortable support for the baby's head and reliable positioning aid for mid-head position and therapeutic interventions

- Helps minimise head deformation and skin abrasion
- Assists in stabilising the midline position of the head
- Helps relieve pressure and promotes correct positioning
- Provides support for the soft skull of the premature baby
- The tested gel is guaranteed free of mould and bacteria
- Easy cleaning of the gel ring - use for up to one year under normal conditions
- Different disposable and multi-weave covers guarantee
  flexible use according to the needs of the premature baby unit
- All materials are tested and selected according to the soft skin of premature babies

3 Sizes Meeting all developmental needs

MedibinoNEO® size S for premature babies up to 800 g,
Dimensions:
90 mm x 80 mm x 18 mm

MedibinoNEO® size M for premature babies between approx. 800g and 2000g,
Dimensions:
110 mm x 95 mm x 22 mm

Dimensions:
130 mm x 110 mm x 25 mm

Disposable, baby-soft covers available for each size

Disposable soft cover

Disposable soft cover WITH gel ball depot included

Soft but stable gel ring helps avoid frequent repositioning in supine or side position

Three sizes allow flexible use for all babies

Inner cushion filled with gel balls provides additional stability when needed

Fresh colours guarantee retrieval and provide a child-friendly design

With MedibinoNEO®, every baby can benefit from comfortable and long-lasting positioning support and pressure relief

The gel ring is an effective way to minimise pressure and protect the soft skull of the premature baby. The ring shape minimises the need for repositioning in the supine and lateral positions and helps relieve pressure points. For additional stabilisation, the MedibinoNEO® has a soft inner cushion with gel balls. The soft surface of the different covers makes babies feel more comfortable and allows flexible use depending on the needs of the clinic.

MedibinoNEO® is an effective helper for various applications on the ward

Apply MedibinoNEO for:

- For the pressure-relieving positioning of premature babies and infants during a long stay in hospital as well as in the maternity ward to inform parents about measures to prevent cranial deformities
- For positioning in 30° elevation and for stabilisation of the central head position in asphyxia and, if required, for prevention of intraventricular haemorrhages (cerebral haemorrhage)
- To stabilise the head in the central position during necessary interventions

Product Specifications

1. Soft gel storage ring made of TG Pur Gel; outer material: biocompatible PU film
The inner core of MedibinoNEO® is non-sterile. It can be disinfected by wiping and is suitable for cleaning with commercially available disinfectants. Shelf life is 24 months; application period from first use is 12 months.

2. Inner cushion coated, filled with soft granules
The inner pad is non-sterile. It is water-repellent and can be disinfected by wiping and is suitable for cleaning with commercially available disinfectants. The shelf life is 24 months; the application period from the first use is 12 months.

3. Cover made of GOTS cotton, medically tested
The cover of the storage ring can be washed at 60°C.

4. Disposable covers made of cotton knit, medically tested
The disposable covers are available WITH and WITHOUT soft granules and they are designed for single use.
